Tips, Tools, Products & Services

PowerShift by NV Energy is Your Partner In Saving Energy and Money

Making your home more energy efficient can help reduce high energy bills while improving the level of your comfort. At NV Energy, we're always looking for ways to make your power bills a little lighter and your pockets a little heavier — that's why the shift is on.

Sign up for NV Energy's **FREE smart thermostats** and you'll get a **mobile app, too**. They're professionally installed and you'll be able to manage indoor temperatures from a smartphone, PC or tablet. It's that easy — just call **855-676-9373**.

Schedule a **FREE Home Energy Assessment** with one of our **PowerShift energy advisors**. They'll walk through your home and provide you with tips to help you save on your monthly power bill. Call **855-676-9373** or email us at powershift@nvenergy.com

Service your heating and air-conditioning systems once a year and replace them if necessary. Remember to replace filters. Customers in Southern Nevada can call **855-676-9373** to have a qualified contractor evaluate their system. They'll also tell you about instant discounts available when the system qualifies for a tune-up, and if needed, replacement.

In warm months, set the thermostat to 78-80 degrees when home and 5-10 degrees warmer at night or when you're not at home.

In the cold months, set the thermostat to 68 degrees when home and between 55-68 degrees when you're not home.

Turn off lights, computers, charging devices and appliances when not in use. You'll soon see the energy savings.

Look for ENERGY STAR® when shopping for new appliances. The easy to recognize label will tell you about the appliance's energy efficiency and how much it costs to operate.

Pools with a variable speed pump save up to 70 percent on energy costs. All you have to do is set it and forget it.

Upgrade to solar water heating. Qualified contractors can help you choose the model that best suits your home.

Use LED bulbs instead of incandescent bulbs. The table below tells you what LED to purchase when replacing a standard incandescent bulb.

EFFICIENCY	Least	Most
	STANDARD INCANDESCENTS	LEDs
LUMENS (less bright to brighter)		
	450	
	40 W \$5.34/yr	5 W** \$0.67/yr***
	800	
1100	60 W \$8.02/yr	10 W \$1.34/yr
	75 W \$10.02/yr	15 W \$2.00/yr
1600	100 W \$13.36/yr	19 W \$2.54/yr
RATED LIFE	1 year*	15–25 years

* Rated life is based on 3 hours of use per day.

** Energy use.

*** Energy cost per year.

FREE Smart Thermostat

\$300 value,
FREE installation,
FREE mobile app,
annual savings of
\$100 on energy
costs

The graphic features a dark blue header with the **powershift** logo (a stylized plug with a leaf) and the text "by NV Energy". Below the header, the text "QUICK START GUIDE" is displayed in large, light blue letters, followed by "Save energy the easy way" in green. A central smartphone displays the thermostat app interface, which includes a temperature scale from 60 to 80, a "TARGET 78 ECO" setting, and a "Saving Energy" indicator. The app also shows "INSIDE 76" and "Outside 89". At the bottom of the app screen, there are buttons for "Set Away" and "Savings 195". The background is decorated with various icons connected by green and yellow lines, including a sun, a clock, a calendar showing "23", a flame, a piggy bank, a smartphone, a cloud with rain, a snowflake, and a Wi-Fi signal.
